

# Modern Witness LT

Are you tired of working with systems that tie up too many resources, and can't get the job done? Then the Modern Witness LT Package was created just for you!

The Modern Witness LT Package includes software, controller, and 2 readers. Everything you need for a two-door system. How about the convenience of a small system with the versatility to be upgraded to a large system, all using the same wire! The LT Package has the ability to control two readers and is expandable to 3 doors. You can upgrade at any time to a larger number of doors with the Modern Witness 2000 system! The LT package also eliminates the need for auxiliary power supplies with our "Single Power Supply Solution". This utilizes one power supply for the controller and door module, which provides power for the locks as well. Versatility, design, and cost are just three reasons to check out a new great opportunity!

## System Specification & Capabilities

- Pre-configured for 2 doors
- Upgradeable to multiple doors
- Same architectural design as a large system
- Full windows drag and drop programming
- Simple pre-wired design
- 500 users
- Multiple actions per card read
